**PENDING**

None

**Attention**

All manufacturers of cellulose insulation are invited to apply to be on this list if they meet the following criteria: Manufacturer must show their product meets federal Weatherization Assistance Program standards (ASTM C739-00) as contained in 10CFR-440, Appendix A dated April 1, 2001; include a label from one of their insulation bags; provide a current copy of the printed test results from a certified test laboratory; verify that the testing lab is accredited by the N.V.L.A.P. or equivalent. This printed information must be given to the Utah Division of Housing and Community Development for their files. Manufacturers must also provide a letter stating that all product sold to Utah Weatherization Agencies during the program year be the product that was tested and certified as stated above. If the product itself has been changed in any way during the program year a new certified test must be completed before the new product may be purchased by local weatherization agencies. Manufacturers must also certify whether the base fire retardant material used in the manufacture of their product is boric acid, ammonium sulfate, etc. Agencies can reserve the right to test any cellulose product they have purchased for compliance to ASTM C739-00 standards. Product that fails is to be replaced by the vendor/manufacturer at their cost.
